1. Introduction

Artificial Intelligence (AI) is not merely a technological trend, but a transformative force reshaping cultures, societies, industries, and business models. As a result, we must rethink traditional paradigms, explore new avenues for growth, and unlock new, innovative value streams.

To ensure that the NTT DATA, Inc. Group ('NTT DATA', 'our', 'us', 'we') remains at the forefront of this revolution while upholding the highest standard of compliance and ethical responsibility, several initiatives have been launched to embed AI across the organization and within our client offerings:

- *The Global GenAI Academy*, designed to upskill our employees and create a shared language around GenAI, ethics, and its practical applications,
- *The Smart AI Agent™ Ecosystem*, aimed at revolutionizing industry solutions through intelligent automation and strategic alliances, and
- *Strategic Partnerships* with trusted vendors such as Microsoft, and most recently OpenAI, to bring transformative GenAI capabilities and services to our employees and clients.

Innovation without responsibility is a risk multiplier. It is essential that, as innovators, we own the responsibility of ensuring AI is developed, deployed and used responsibly and ethically. Furthermore, GenAI queries may consume between 10 and 30 times more electricity than a standard search engine query. Our considerations for using AI must, therefore, include measuring and limiting negative environmental, social, and governance (ESG) impacts as well as mitigating associated risks.

The objective of the **Artificial Intelligence Use Policy** ('Policy') is to ensure that we maximise the value and potential that AI offers while ensuring that AI is used by end-users in an ethical, responsible, sustainable and compliant way. Separate policies will apply to building, buying, creating or deploying of AI Tools.

This Policy is intended to supplement, not contradict, limit, or replace, existing policies and mandatory legal requirements, legal prohibitions, and contractual obligations, all of which remain in full force and effect.

2. Purpose and Scope

2.1. Purpose

This Policy drives alignment with organisational goals and ethical principles by setting out expected and prohibited actions or behaviour as it relates to end-user use of AI Tools. Furthermore, this Policy provides additional recommendations to enhance the use of AI Tools as set forth in Appendix 3.

2.2. Scope

This Policy applies to the NTT DATA, Inc. Group ('NTT DATA') employees, contractors and relevant third-party vendors ('I', 'you, your') who use AI systems, tools, capabilities and technologies on NTT DATA owned, operated or managed systems, tools and networks.

2.3. Definition of Terms

All capitalized terms defined in this Policy have the respective meanings set forth in Appendix 1.

© 2025 NTT DATA, Inc. Group

2.4. Updates

This Policy is subject to continual review and improvement to reflect changes in the external/internal AI environment.

2.5. Reporting Concerns

It is your duty to speak up if you know of or suspect any behaviour or misconduct that may be a breach of this Policy, our applicable codes of conduct, business ethics, or any other NTT DATA policy.

If you are unsure if a particular act constitutes such behaviour or misconduct, or if you have any queries, these should be raised via official whistleblowing channels, or with your line manager, HR representative, risk or legal team. Any concerns that are reported will be handled in accordance with applicable NTT DATA policies.

© 2025 NTT DATA, Inc. Group

3. Policy

3.1. Use of AI

Failure to comply with this Policy may result in your access to AI Tools being restricted. Disciplinary action, up to and including termination of employment, or any other action NTT DATA deems appropriate may also be instituted.

NTT DATA reserves the right to access, monitor, intercept, and review, all uses of AI Tools in accordance with NTT DATA policies and applicable laws.

NOTE: The risks associated with the use of AI Tools increases when its usage extends to GenAI such as DeepSeek, and you must only use GenAI Tools if you can safely mitigate these risks. One way of mitigating these risks is applying the principles set out in this Policy.

3.2. Expected Actions or Behaviour

This section defines the minimum requirements in terms of expected actions or behaviour with regards to the use of AI.

Expected Actions or Behaviour
Data Privacy and Protection
Anonymise or pseudonymise data before using it in AI Tools, where feasible.
Minimize data collection and use to what is necessary for the AI Tool's intended function.
Respect individuals' rights when using AI Tools, including privacy and consent requirements.
Data Quality and Bias Mitigation
Use datasets and AI Models that are appropriate, fair, and free from known bias.
Assess Generated Content for accuracy, robustness, fairness and appropriateness before use or recommending its use.
Human Oversight and Accountability
Take responsibility for the outcomes of and the decisions you make when using Generated Content.
Maintain clear accountability for decisions and outcomes involving Generated Content.
Apply human oversight to review and, where necessary, override Generated Content
Transparency and Explainability
Clearly inform users when they are interacting with an AI Tool or Generated Content.
Be transparent when sharing content generated by or heavily modified by AI.
Disclose the use and origin of Generated Content or modified Generated Content when sharing it.
Ensure Generated Content is understandable to non-technical stakeholders.
Validate the origin and accuracy of references used to Generate Content.
Only use Generated Content if the information can be verified from a credible source.
Compliance and Ethics
Comply with all applicable Data Privacy and Protection, Information Security and AI-related policies and standards.
Adhere to Content Restrictions that define the types of information that may be used by AI Tools.
Ensure use of third-party data or intellectual property aligns with applicable customer and other contracts.
Adhere to acceptable use policies and published terms of use for AI Tools.
Use AI Tools and Generated Content in accordance with applicable laws, internal policies, and ethical standards. Consult your local legal & risk management teams for further guidance.
Comply with internal processes for managing Intellectual Property when using AI Tools.

© 2025 NTT DATA, Inc. Group

Tool Usage and Access
Use AI Tools in accordance with their intended purpose and published documentation.
Only use AI Tools that have been approved by the AI Centre of Excellence.
Use AI Tools that support explainability and traceability of Generated Content.
Explore AI capabilities for learning and development using approved tools.
Training, Feedback and Reporting
Complete all relevant and mandated AI training relevant to your role.
Report risks, concerns, or anomalies related to AI use through established channels.
Log AI-related risks in accordance with the Enterprise Risk Management Framework.
Provide feedback through established channels to help improve AI Tools and their responsible use.
Efficiency and Optimization
Use techniques such as prompt engineering and few-shot learning to optimise the efficiency of AI Tools.
Create clear documentation and guidance to support effective and responsible AI use.
Promote the design and use of AI Tools that facilitate explainability of Generated Content and decisions.

3.3. Prohibited Actions or Behaviour

This section defines minimum requirements in terms of prohibited actions or behaviour with regards to the use of AI.

Prohibited Actions or Behaviour
Data Privacy and Protection
Processing Data or Generating Content using confidential or proprietary information without authorisation or in violation of applicable laws, internal policies, ethical and Intellectual Property guidelines, or contractual obligations.
Processing Data or Generating Content using Personal Data, Special Category Data, or Personal Data relating to Children and/or Vulnerable Persons without a legitimate legal basis or consent from the Data Subject.
Disclosing Generated Content that infringes upon privacy rights or exposes Personal Data without consent from the Data Subject.
Using identifiable information (e.g., photos, videos, voice prints) to Generate Content without consent from the Data Subject.
Using AI to identify or re-identify an individual or juristic person without a lawful basis or where such activity will introduce unacceptable risk or harm.
Inputting confidential, proprietary, or sensitive information into public AI Tools without explicit authorization.
Legal, Contractual and Intellectual Property Violations
Processing Data or Generate Content if it may infringe upon any contractual obligation.
Processing Data or Generate Content if it may infringe upon or violate third parties' Intellectual Property rights.
Relying on Generated Content as a substitute for qualified legal, financial, or professional advice.
Guaranteeing the accuracy, correctness or completeness of Generated Content in discussions, communications, or contracts.
Bias, Harm and Disinformation
Intentionally using AI in ways that result in biased, discriminatory, or unfair outcomes.
Using AI to generate offensive, harmful, misleading, or false content.
Using AI in a manner that places individuals, or groups, or society at risk of harm.
Using AI to make autonomous decisions that significantly impact individuals without appropriate human oversight and accountability.
Using AI to manipulate, deceive, or exploit individuals, including through persuasive or coercive techniques.

© 2025 NTT DATA, Inc. Group

Security and System Integrity
Using unapproved or unauthorized AI Tools for work-related tasks or data processing.
Using AI to compromise the software, networks, services, operations or data of clients, vendors, or partners.
Bypassing, breaking or disabling any protective measures or safety mitigations implemented in AI Tools.
Deception and Misuse
Using AI for illegal, deceptive, or harmful purposes, including impersonation, fraud, or misrepresentation.
Failing to disclose AI involvement in decision-making processes that may affect individuals.

3.4. Exceptions

Any exceptions to this Policy will only be approved if deemed strictly necessary by Office of the CIO. To request an exception, please directed your query to group.itaicoe.policyexceptions@global.ntt.

7. Appendix 1 - Definitions

Term	Definition
Anonymisation	The process of removing or altering personal data in such a way that individuals can no longer be identified - directly or indirectly - by anyone, using any reasonably available means.
Approved AI Tools	AI Tools approved for use by satisfying all the required internal compliance checks (security, data privacy, usage).
Artificial Intelligence (AI)	Artificial Intelligence refers to computer systems designed to perform tasks that typically require human intelligence. They mimic human intelligence and can learn, reason, and adapt, often improving their performance through experience and data analysis. They can recognize patterns, reach conclusions, make informed judgments, predict future behaviours and automate repetitive functions.
AI Principles	A set of guidelines, values, and ethical considerations that govern the development, deployment, and use of AI.
AI System / AI Tool	A machine-based system that, for explicit or implicit objectives, infers, from the input it receives, how to generate outputs such as predictions, content, recommendations, or decisions that can influence physical or virtual environments. Different AI Systems vary in their levels of autonomy and adaptiveness after deployment. Here, AI System includes AI models as parts of it. The distinction between an AI Tool and an AI system is primarily one of scope, complexity, and integration.
Children	A minor as defined under applicable law (typically 16 years of age or younger).
Content Restriction	Refers to guidelines or rules that limit or regulate the type of content that can be generated by or used within AI Tool.
Data Subject	The natural living person or existing juristic person to whom Personal Data relates. This term includes analogous terms as those are defined under applicable data protection laws.
Explainability / Explainable	Refers to the ability to understand and articulate the reasons behind an AI Tool's decisions and predictions. This includes identifying the factors the AI considered, how these factors were weighted, and the logical steps the AI took to arrive at its output.
Generative AI (GenAI)	A type of artificial intelligence that can create new content that closely resembles human-created content, such as text, audio, images, video, or code, based on patterns learned from existing data. These systems use complex algorithms to generate original outputs that mimic human-created content.
Intellectual Property	Any content, data, code, models, inventions, designs, trademarks, trade secrets, or other creations of the mind that are legally recognized and protected under applicable intellectual property laws.
NTT DATA Group Corp (NDHQ)	NTT DATA GROUP Corporation, a company located in Japan.
NTT DATA, Inc. Group (NTT DATA)	NTT DATA, Inc. Group and NTT DATA Headquarters themselves and the Group Companies defined in the NDHQ Group Agreement between NDHQ and NTT DATA.
Process Data (Data Processing)	Refers to the collection and manipulation of digital data to produce meaningful information.
Generative AI (GenAI)	A subset of AI capable of generating new content, including text, code, images, audio, video, and other media content.
Generated Content	Artifacts automatically created by AI Tools in response to written prompts or input.
Harm (to an individual)	Negative impacts on an individual's physical, psychological, social, or economic well-being. This includes, but is not limited to, discrimination, denial of rights or opportunities, physical injury, emotional distress, or financial loss.
Juristic Person	A **juristic person** (also known as a **legal person** or **artificial person**) is an entity that is recognized by law as having legal rights and obligations, like those of a natural person (a human being). This concept allows organizations to enter contracts, sue and be sued, own property, and carry out other legal activities in their own name.

© 2025 NTT DATA, Inc. Group

Personal Data	Any information that relates to an identified or identifiable living individual or juristic person.
Pseudonymisation	A data protection technique where personal data within a dataset is replaced with artificial identifiers or pseudonyms. This process helps reduce the risk of identifying individuals in case of a data breach or unauthorized access, while still allowing data to be used for analysis or processing.
Scraping Data	The automated extraction of data from digital sources without the permission of the data source's owner.
Aggregating Data	Gathering and combining data from multiple sources to create a unified dataset which is used to identify or re-identify an individual.
Special Category Data	Personal information that is particularly sensitive due to its potential for discrimination or harm: Racial or ethnic origin, political opinions, religious or philosophical beliefs, trade union membership, health information, sex life and sexual orientation information, criminal records or alleged criminal activity, genetic and biometric data.
Compliance Rating / Usage Rating	The level of permitted usage of an Approved AI Tool, typically determined by the geographic location of the tool and how it treats data. Usage Ratings are: - **Unrestricted**: Technology can be used in all locations with all data types. - **Restricted**: Technology can be used in specific locations with specific data types.
Vulnerable Persons	A Data Subject who, by reason of illness, disability, age, or emotional distress may be unable to take care of themselves or prevent themselves from being exploited. Examples include Children, Employees, mentally ill persons, asylum seekers, elderly persons, and patients.

8. Appendix 2 - NDHQ AI Guidelines

NTT DATA Group have published AI Guidelines, which all NTT DATA employee, contractors and third parties must comply with.

8.1. Realizing Well-being and Sustainability of Society

NTT DATA will focus on sustainability as well as well-being of human society. NTT DATA will promote solving social issues by using AI in recognition of diversity and in consideration with basic human rights. AI should not harm humans; instead, we will use AI to empower humans by supporting their lives and extending their capabilities.

8.2. Co-Creating New Values by AI

NTT DATA strives to harness the potential benefits of AI and promote innovation by interacting and co-creating with AI stakeholders, including those who engage in research, development, operation, and utilization of AI and by establishing long-term relationships with clients.

8.3. Fair, Reliable, and Explainable AI

For users of AI to realize its fairness and trustworthiness, NTT DATA invests reasonable efforts in presenting the decisions based on AI in a form that can be understood by humans and does not cause unfair discrimination. We will strive to minimize concerns about the AI's decision-making process to apply constant provision of appropriate AI services.

8.4. Data Protection

Privacy and security are critical to NTT DATA in providing AI services. Our AI leverages the principles of privacy by design to protect against unauthorized access, strengthen data traceability, and develop the proper means and policy for collecting, storing, using, and processing personal information.

8.5. Contribution to Dissemination of Sound AI

NTT DATA will work to further the understanding of AI to accelerate its acceptance. NTT DATA will also contribute to the development of society with healthy and harmonious dissemination of AI by improving literacy of AI users and by service design that is universal design compliant.

© 2025 NTT DATA, Inc. Group

9. Appendix 3 - Recommendations

This section provides general, practical recommendations to enhance the use of AI Tools.

9.1. Speed and Efficiency

- **Be Direct and Succinct in Prompts:** Avoid conversational fillers. Get straight to the point with your requests. Instead of: “Could you please tell me about the key takeaways from the latest market report?” try: "Summarize key takeaways from the latest market report.”
- **Specify Format & Length:** If you need a bulleted list, say so. If you need 100 words, tell the AI. This reduces back-and-forth and refines the output immediately. Example: “List three key benefits of cloud computing in bullet points, max 50 words each.”
- **Provide Context Upfront:** Don’t make the AI guess. Give it all the necessary approved background in the initial prompt to avoid irrelevant outputs. Example: “As a marketing manager, draft a social media post for LinkedIn promoting our new cybersecurity product. Focus on enterprise benefits.”
- **Iterate, Don’t Restart:** If the first output isn’t perfect, refine your prompt rather than starting from scratch. “Make it more concise”, “rewrite in a formal tone”, or “expand on point number two” are efficient ways to refine.
- **Leverage Templates & Examples:** If you have specific content types you generate often (e.g., social media captions, email drafts), create templates or provide examples in your prompts for consistent and rapid output.

9.2. Compliance and Ethical Use

- **Always Verify:** Treat AI-generated content as a first draft. Always fact-check, review for accuracy, and verify against credible sources, especially for critical information.
- **Label AI-Generated Content:** Clearly label content generated or substantially modified by AI, particularly when it is used for decision-making. (e.g., “AI-Assisted Draft”, “Generated by [AI tool name]”). Do not represent AI-generated content as human generated.
- **Attribute & Respect IP:** Do not use AI to generate content that infringes on existing copyrights, trademarks, or intellectual property. If using third-party information, ensure you have permission.
- **Human Oversight is Non-Negotiable:** Ensure a human is always in the loop for review and final approval. AI should augment, not replace, human judgment.
- **Report Anomalies:** If you observe biased, harmful, or incorrect outputs from an AI system, report it immediately through your established internal channels. This helps improve the system and ensures compliance.

9.3. Protect Our Data

- Don’t input sensitive personal data into AI tools unless you have been given explicit consent and have received the necessary go-ahead.
- Adhere to applicable contracts in connection with using Third party data and Intellectual Property as Inputs.
- Be mindful of what you do with AI-generated content. If it contains sensitive information, ensure it is stored and shared in compliance with applicable policies.

© 2025 NTT DATA, Inc. Group

9.4. General Recommendations

- **Understand AI's "Confidence" vs. "Accuracy":** AI systems often sound very confident, even when they're wrong. Don't mistake a fluent, well-articulated response for factual accuracy. Always verify critical information.
- **Be Aware of "Hallucinations":** AI models can confidently generate false information or make up facts. Always cross-reference crucial details with reliable sources.
- **Think Critically About Bias:** AI models are trained on vast datasets, which can reflect biases. Be aware that outputs might inadvertently carry these biases, and actively review them for fairness, especially when the AI is used for sensitive tasks.
- **Recognize AI's Limitations (and Your Own):** AI does not "think" or "understand". It's a pattern matcher. Don't ask it to do things that require true human comprehension, empathy, or complex judgment.
- **Garbage In, Garbage Out:** The quality of the AI's output is directly tied to the quality of your input. If you get poor results, look at how you're asking the question. Where possible, also look at the quality of the input information used by AI.
- **Learn Basic Prompt Engineering**: You don't need to be an expert, but understanding a few key techniques will dramatically improve your results:
    - **Role-Playing:** Tell the AI to "act as a marketing specialist" or "be a Data Architect" to get responses tailored to a specific perspective.
    - **Setting Constraints:** Specify word count, tone (e.g., "concise", "formal", "friendly"), and specific elements to include or exclude.
    - **Provide Examples:** If you have a desired output style, provide a few examples in your prompt for the AI to learn from.
    - **Chain of Thought Prompting:** Break down complex tasks into smaller steps for the AI to follow, mimicking human reasoning.
- **Experiment and Explore:** Don't be afraid to try different prompts, different NTT DATA approved AI Tools, and different approaches. The more you experiment, the better you'll understand what works and what doesn't.
- **Understand Environmental Impact:** While not a direct daily action, be aware that AI, especially large models, consumes significant energy. Using it efficiently contributes to reducing this impact.
- **Stay Updated:** AI technology evolves rapidly. Dedicate a small amount of time to stay informed about new capabilities, limitations, and ethical guidelines.
- **Focus on Augmentation, Not Replacement:** View AI as a powerful assistant that can amplify your abilities and free up time for more complex, creative, or strategic tasks. It's a tool to make you more effective, not to do your job for you.
